

**1. Which term is also known as digital discovery or computer forensic analysis?**

- A. Cyber Security
- B. Data Mining
- C. Computer Forensics
- D. Network Sniffing

**2. What is the methodical examination of computer media for evidence called?**

- A. Computer forensics
- B. Data recovery
- C. System auditing
- D. Encryption

**3. Which of the following is NOT part of the core computer forensics process?**

- A. Collection
- B. Presentation
- C. Analysis
- D. Software Development

**4. Forensic evidence is useful in which of the following?**

- A. Criminal cases
- B. Civil disputes
- C. Employment proceedings
- D. All of the above

**5. What allows a specialist to see what a computer user was doing?**

- A. Reconstruction
- B. Decryption
- C. Formatting
- D. Defragmentation

**6. Why must evidence be handled by trained specialists?**

- A. To keep it secret
- B. To maintain credibility in court
- C. To make it run faster
- D. To delete unwanted files

**7. Evidence not handled correctly by specialists may be considered:**

- A. Valid
- B. Tainted
- C. Certified
- D. Optimized

**8. Which trait is essential for a forensic specialist?**

- A. Ability to stand up to cross-examination
- B. Ability to write code quickly
- C. Knowledge of marketing
- D. Skill in graphic design

**9. The process of inspecting and copying designated data per federal guidelines is:**

- A. Data Seizure
- B. Data Recovery
- C. Media Conversion
- D. Data Deletion

**10. Why is data duplication performed in forensics?**

- A. To have more files
- B. To ensure the original is never altered
- C. To save space
- D. To encrypt the data

**11. Which service involves recovering deleted emails?**

- A. Data Seizure
- B. Media Conversion
- C. Data Recovery
- D. Data Protection

**12. Extracting data from old or unreadable devices is called:**

- A. Media Conversion /
- B. Data Recovery
- C. Virus Prevention
- D. Evidence Seizure

**13. What must be prevented during the forensic methodology to ensure integrity?**

- A. Data Seizure
- B. Virus Introduction
- C. Reporting
- D. Analysis

**14. What documents how evidence was handled from start to finish?**

- A. Chain of Custody
- B. System log
- C. User manual
- D. File extension

**15. Forensic investigations should limit the effect on:**

- A. Evidence integrity
- B. Business operations
- C. Data recovery
- D. Expert testimony

**16. The first step in core forensic steps is to:**

- A. Recover data
- B. Protect the system
- C. Write the report
- D. Decrypt files

**17. Locating existing, hidden, and deleted files is known as:**

- A. File discovery
- B. Data Seizure
- C. Media Conversion
- D. Reconstruction

**18. Accessing protected or encrypted files is called:**

- A. Decryption
- B. Recovery
- C. Analysis
- D. Identification

**19. What is the final step in the core forensic process?**

- A. Protect the system
- B. Analysis and Reporting
- C. Recovering data
- D. Virus prevention

**20. According to legal standards, evidence must be:**

- A. Authentic and accurate
- B. Complete and convincing
- C. In conformity with legislative rules
- D. All of the above

**21. Why is cyber evidence considered "invisible"?**

- A. It is deleted immediately
- B. It requires specific procedures to view
- C. It is always encrypted
- D. It only exists on paper

**22. A major challenge in forensics is that data changes:**

- A. Every year
- B. Once a day
- C. Moment by moment
- D. Only when deleted

**23. Opening a file during an investigation can potentially:**

- A. Improve its quality
- B. Change the data
- C. Delete the file
- D. Encrypt the file

**24. Who uses computer forensic evidence to investigate embezzlement?**

- A. Criminal Prosecutors
- B. Individuals
- C. Insurance Companies
- D. Web Designers

**25. Corporations use forensics to investigate:**

- A. Theft of trade secrets
- B. Employee misappropriation of information
- C. Both A and B
- D. None of the above

**26. Individuals might use forensic evidence to support claims of:**

- A. Wrongful termination
- B. Age discrimination
- C. Both A and B
- D. Murder

**27. What is the objective of a preliminary investigation?**

- A. To convict the suspect immediately
- B. To determine the scope of the incident
- C. To delete unnecessary files
- D. To sell the hardware

**28. The "Golden Hour" refers to which phase?**

- A. First Response
- B. Identification of Evidence
- C. Analysis
- D. Reporting

**29. What should be captured during volatile data collection?**

- A. Hard drive contents
- B. RAM and active processes
- C. Printed documents
- D. Old backup tapes

**30. Why is isolating systems important during the first response?**

- A. To speed up the computer
- B. To prevent remote tampering
- C. To update the software
- D. To save power

**31. Documenting the scene includes which of the following?**

- A. Photos of the physical setup
- B. Recording on-screen activity
- C. Both A and B
- D. None of the above

**32. Locating PCs, laptops, and IoT gadgets is part of:**

- A. Device Discovery
- B. Network Mapping
- C. Cloud Assets
- D. Data Recovery

**33. Identifying log sources from firewalls and routers is called:**

- A. Device Discovery
- B. Network Mapping
- C. Volatile Data Collection
- D. Reporting

**34. In the "3 As" methodology, what does "Acquire" mean?**

- A. Getting evidence without altering the original
- B. Buying new forensic tools
- C. Hiring a specialist
- D. Deleting the suspect's files

**35. Which process uses hashing to prove evidence hasn't changed?**

- A. Acquire
- B. Authenticate
- C. Analyze
- D. Archive

**36. "Analyze" in the 3 As involves:**

- A. Making a copy
- B. Examining data for clues
- C. Deleting files
- D. Selling evidence

**37. Defining the scope (e.g., internal policy vs. criminal act) is part of:**

- A. Initial Assessment
- B. Resource Allocation
- C. Risk Mitigation
- D. Reporting

**38. What is the purpose of a Case Design & Checklist?**

- A. To ensure no steps are missed
- B. To slow down the investigation
- C. To help the suspect
- D. To use more paper

**39. EnCase, FTK, and Autopsy are examples of forensic:**

- A. Hardware
- B. Software
- C. Operating Systems
- D. File systems

**40. Using Faraday bags is a technique for:**

- A. Initial Assessment
- B. Risk Mitigation
- C. Data Recovery
- D. Decryption

**41. Bit-Stream Imaging creates what kind of copy?**

- A. A compressed version
- B. An exact, bit-for-bit duplicate
- C. A text summary
- D. A low-resolution photo

**42. Which hash algorithms are used for integrity validation?**

- A. MD5
- B. SHA-1
- C. SHA-256
- D. All of the above

**43. The Master File Table (MFT) is inspected for:**

- A. File metadata and timestamps
- B. Keyboard layouts
- C. Monitor resolution
- D. Battery life

**44. Where is "hidden" data often searched for on a disk?**

- A. Slack space
- B. Alternate Data Streams (ADS)
- C. Both A and B
- D. The desktop wallpaper

**45. Which Windows component is analyzed for user activity and software history?**

- A. The Registry
- B. Notepad
- C. Calculator
- D. Media Player

**46. Investigating information hiding involves detecting data in:**

- A. Images or audio
- B. Slack space
- C. Both A and B
- D. Paper files

**47. Concealing messages within images or text is called:**

- A. Steganography
- B. Encryption
- C. Compression
- D. Formatting

**48. Changing file extensions to hide evidence is a form of:**

- A. File Manipulation
- B. Steganography
- C. Data recovery
- D. Hashing

**49. Analyzing files for statistical anomalies to find hidden data is:**

- A. Steganalysis
- B. Signature Analysis
- C. Hash Analysis
- D. Media Conversion

**50. Identifying file headers that don't match extensions is:**

- A. Signature Analysis
- B. Hash Analysis
- C. Steganography
- D. Data Seizure

**51. Which tool is used specifically for steganography detection?**

- A. StegDetect
- B. Wireshark
- C. FTK
- D. Splunk

**52. Disk editors are used primarily for:**

- A. Slack space analysis
- B. Sending emails
- C. Browsing the web
- D. Playing music

**53. Scrutinizing email headers helps identify:**

- A. The origin and path of messages
- B. The monitor's refresh rate
- C. The computer's RAM size
- D. The user's keyboard type

**54. Which email header field represents the originating server?**

- A. The bottom-most "Received" line
- B. The "To" field
- C. The "Subject" line
- D. The "CC" field

**55. A globally unique identifier used to track an email is the:**

- A. Message-ID
- B. IP Address
- C. Password
- D. Username

- 56. Which header indicates if an email has attachments or images?** A. MIME-Version  
B. X-Spam-Status C. Return-Path D. Received
- 57. Hop Analysis is used to trace:** A. Sequence of IP addresses B. Computer battery usage  
C. Keyboard strokes D. Mouse movements
- 58. SPF, DKIM, and DMARC are used for:** A. Authentication Check B. Data recovery C. Media conversion  
D. Disk imaging
- 59. How can an investigator access raw email metadata?** A. "Show Original" or "View Message Source"  
B. Deleting the email C. Forwarding the email D. Replying to the email
- 60. Tools like MXToolbox are used for:** A. Parsing raw metadata B. Breaking into computers  
C. Writing reports D. Capturing RAM
- 61. Tracing Internet access involves analyzing:** A. Network logs and IP addresses B. Traffic patterns  
C. Both A and B D. Paper mail
- 62. Which log shows websites visited and command-and-control contact?** A. DNS Logs  
B. Power logs C. Printer logs D. Error logs
- 63. Splunk and QRadar are examples of:** A. Firewall management consoles B. Email clients  
C. Web browsers D. Word processors
- 64. Capturing live packets on a network is often done with:** A. Wireshark B. Notepad  
C. Paint D. Excel
- 65. Why is RAM called "volatile"?** A. It is very heavy B. Data is lost when power is removed  
C. It is very expensive D. It cannot be analyzed
- 66. RAM may contain the only evidence of:** A. Fileless malware B. Incognito browsing  
C. Both A and B D. Hardware failure
- 67. Where do encryption keys often exist in plain text?** A. RAM B. The hard drive C. The monitor  
D. The mouse
- 68. Rootkits that hide deep in the OS are detected by tracing:** A. Kernel Modules B. Printer jobs  
C. Screen brightness D. Audio levels
- 69. Which tool is a lightweight, one-click Windows memory imager?** A. Magnet DumpIt  
B. Belkasoft Live RAM Capturer C. WinPmem D. Wireshark
- 70. The alteration of data caused by the act of capturing memory is called:** A. System Smearing  
B. Data Recovery C. Hashing D. Steganography
